

Beginner to Elite Strength Standards

1RM strength standards for your full exercise list, calculated for a 75 kg male. All weights in kg, derived from BW multipliers (shown below each weight). Standards sourced from Strength Level (millions of logged lifts); exercises not on the site are estimated from comparable movements and marked with $\approx$.

How to Read the Tables

Strength Levels

LEVEL	PERCENTILE	TRAINING EXPERIENCE
Beginner	Top 95% (stronger than 5%)	~1 month
Novice	Top 80% (stronger than 20%)	~6 months
Intermediate	Top 50% (stronger than 50%)	~2 years
Advanced	Top 20% (stronger than 80%)	~5+ years
Elite	Top 5% (stronger than 95%)	~5+ years, competitive

All kg values are calculated as BW ratio $\times$ 75 kg. The ratio below each weight lets you scale to any bodyweight. An $\approx$ symbol means the exercise isn't on Strength Level; standards are estimated from similar movements.

VIII. Bodyweight Rep Standards

Male Reps at 75 kg BW

For exercises commonly tracked by reps rather than load.

EXERCISE	BEG.	NOV.	INT.	ADV.	ELITE
Pull-Ups	<1	6	14	24	34
Chin-Ups	<1	7	14	23	32
Dips	1	10	20	32	45
Reverse Lunge (BW)	<1	11	35	64	98

Rep values taken from the 75 kg bodyweight row on Strength Level.

Notes on Estimated Exercises

How estimates were derived

- **Z Press** — ~85% of OHP. No leg drive or back support makes it harder than standing OHP.
- **Modified Bradford Press** — ~70% of OHP. Partial ROM and behind-the-neck transition reduce max load.
- **Meadows Row** — Estimated from single-arm dumbbell row. Landmine angle shifts loading slightly.
- **High-Cable Row** — ~90% of lat pulldown. Similar movement pattern, slightly different angle.
- **Dead Row** — ~105% of bent over row. Dead stop eliminates stretch reflex but allows heavier pulls.
- **Incline Power Bombs** — Estimated from lying tricep extension. Incline angle shifts emphasis slightly.
- **Rocking Pushdowns** — Estimated from cable tricep pushdown standards. Rocking variant adds momentum.
- **Belt Squat** — Between front and back squat. No spinal loading allows similar or higher loads to front squat.
- **Low Bar Squat** — ~110% of the generic squat (which mixes high/low bar). Greater posterior chain involvement.
- **DB Leaning Step Up** — Estimated from Bulgarian split squat (similar unilateral loading pattern).
- **Reverse Lunge (BB 1RM)** — Derived from Bulgarian split squat ratios, since StrengthLevel only tracks BW reps.
